

ANSH RASTOGI

Developer | Java · Spring Boot · React.js · Distributed Systems · AI-Integrated Applications
+91 7007812109 | anshrastogi8@gmail.com | linkedin.com/in/anshrastogi8 | github.com/anshrastogi8 | Bengaluru, India

PROFESSIONAL SUMMARY

Software Engineer with 2+ years of enterprise experience designing, building, and deploying highly scalable, reliable, and secure backend systems and full-stack applications. Proficient in Java, Spring Boot, React.js, and distributed microservices architecture — delivering up to 80% faster endpoint response times and processing 1M+ records in production. Experienced in AI-integrated application development, Agile sprint delivery, and maintaining high performance and security across distributed systems. Passionate about emerging technologies and integrating them to drive innovation.

TECHNICAL SKILLS

Languages & Frameworks: Java, Spring Boot, Spring Framework, Spring Security, Spring Cloud, Hibernate, JPA, JavaScript (ES6+), TypeScript, React.js

Backend & APIs: REST APIs, JWT Authentication, Microservices Architecture, Event-Driven Architecture, Apache Kafka, Transaction Management, Keycloak

Frontend: React.js, Redux, Context API, Bootstrap, HTML5, CSS3, Tailwind CSS

Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis (polyglot persistence)

Build Tools & DevOps: Maven, Git, GitHub, Docker, Linux, Shell Scripting, Postman, IntelliJ, VS Code

Testing & QA: JUnit, Mockito (~80% unit test coverage), Integration Testing

AI & Emerging Tech: AI-integrated application development, LLM API integration, Recommendation Systems, Async event-driven AI pipelines

Methodologies: Agile/Scrum, OOP, SOLID Principles, ACID Compliance, Design Patterns, Secure Software Development

PROFESSIONAL EXPERIENCE

Endava Solutions India Pvt. Ltd. (formerly GalaxE.Solutions)

Aug 2023 – Present

Full Stack Developer (Promoted: Associate Developer to Developer) | Bengaluru, India

- Designed and deployed highly scalable, reliable backend services as part of a distributed enterprise system — spearheading migration of a legacy JSP + Oracle monolith to Spring Boot + React.js + PostgreSQL microservices architecture, improving scalability, deployment flexibility, and feature delivery speed.
- Created and delivered 3 production-grade full-stack modules (data upload, mapping, reporting) end-to-end — from design through testing and deployment — improving reporting accuracy by 25% and eliminating manual data reconciliation.
- Measured, maintained, and optimized distributed system performance by engineering backend data pipelines processing 1M+ records, reducing execution time by 30% through algorithm refactoring, SQL query rewrites, and composite indexing strategies.
- Diagnosed and resolved critical production incidents in backend services, identifying root causes in transactional workflows and applying targeted fixes — achieving zero data-loss incidents over the last quarter.
- Delivered consistent endpoint performance improvements of 66–80% (500ms to under 100ms) through pagination, query optimization, and strategic PostgreSQL indexing — ensuring high performance and reliability of production applications.
- Enforced secure, transactional integrity across critical workflows using Spring Security, JWT, Spring @Transactional, and rollback mechanisms — maintaining zero security incidents and zero data-loss in production.
- Worked in Agile sprint environment to deliver quality software consistently — collaborating with development, product, QA, and architecture teams across the full product lifecycle.
- Maintained ~80% unit test coverage with JUnit and Mockito, reducing post-deployment regression bugs by 30% across two major release cycles.

KEY PROJECTS

AI Fitness Recommendation System | Spring Boot, Spring Cloud, Apache Kafka, Keycloak, React.js, PostgreSQL, MongoDB, Redis

- Architected and built an AI-integrated distributed application with 5+ microservices using Spring Boot and Apache Kafka for async event-driven communication — reducing inter-service coupling by 40% and improving system resilience.
- Integrated AI-driven recommendation engine with polyglot persistence (PostgreSQL, MongoDB, Redis), improving recommendation relevance by ~30% and cutting data read latency by ~45%.
- Configured Keycloak with Spring Cloud Gateway for centralized JWT-based authentication across all backend microservices and React.js frontend — securing the entire distributed service mesh.

Ixigo Clone – Flight Booking Application | Java, Spring Boot, React.js, PostgreSQL, JPA, JWT, Spring Security

- Designed and built a full-stack booking platform from design through deployment with 12 REST APIs — covering flight search, seat reservation, and role-based access control (RBAC) secured via Spring Security + JWT.
- Optimized backend performance by 81% (800ms to 150ms) using PostgreSQL composite indexing, SQL optimization, and JDBC connection pooling — ensuring high performance and maintainability.
- Guaranteed ACID compliance across multi-step booking workflows using Spring @Transactional and JPA Optimistic Locking, cutting race-condition rollbacks by 20%.
